

QMEA

1. A process that produces one of several possible results is called a(n) _____.
 - A. Event
 - B. Experiment
 - C. Outcome
 - D. Probability
2. A particular result of an experiment is called a(n) _____.
 - A. Outcome
 - B. Event
 - C. Sample space
 - D. Probability
3. The set of all possible outcomes of an experiment is called the _____.
 - A. Event
 - B. Probability
 - C. Sample space
 - D. Relative frequency
4. A collection of one or more outcomes of an experiment is called a(n) _____.
 - A. Sample space
 - B. Event
 - C. Experiment
 - D. Probability
5. _____ is a numerical measure of how likely an event is to occur.
 - A. Outcome
 - B. Sample space
 - C. Probability
 - D. Experiment
6. The value of probability must always be between _____.
 - A. -1 and 1
 - B. 0 and 1
 - C. 0 and 10
 - D. 1 and 100
7. What is the probability of an impossible event?
 - A. 0
 - B. 0.5
 - C. 1
 - D. -1

8. What is the probability of an event that is certain to occur?
- A. 0
 - B. 0.5
 - C. 1
 - D. 100
9. An event with a probability of 0 is called a(n) _____ event.
- A. Certain
 - B. Independent
 - C. Impossible
 - D. Random
10. An event with a probability of 1 is called a(n) _____ event.
- A. Impossible
 - B. Certain
 - C. Independent
 - D. Random
11. Which approach to probability estimates probability based on how often an event occurs in repeated observations or historical data?
- A. Classical approach
 - B. Subjective approach
 - C. Relative frequency approach
 - D. Conditional approach
12. Which approach to probability is based primarily on an individual's judgment, experience, and available information?
- A. Classical approach
 - B. Relative frequency approach
 - C. Experimental approach
 - D. Subjective approach
